Executive Summary

The Youth Risk Behavior Survey (YRBS) has been administered to high school students in grades 9-12 in the Buffalo County Area, Nebraska from 2000 to 2016. This project has been primarily funded by the Buffalo County Community Health Partners, while the State of Nebraska pays for administration in any state sampled classrooms. The Bureau of Sociological Research began conducting this oversample in 2007.

The 2016 survey was administered to 1,332 students in nine high schools. Students were selected using random sampling procedures provided by the Centers for Disease Control and Prevention (CDC). These procedures include sampling students by classroom. All students in selected classrooms who were in grades 9-12 were eligible to participate. Please see Appendix B for estimates of sampling error for the 2016 oversample. The 2016 YRBS survey instrument, along with the 13 additional questions specific to the Buffalo County area, can be found in Appendix A.

Data were collected, entered, and verified for response eligibility. Responses from 49 students were tagged in the dataset as potentially problematic. These students provided five or more out of range answers, repeatedly gave inconsistent responses, and/or drew pictures or patterns on the answer sheet. Collected data were not weighted in any way.

The Executive Summary summarizes responses to selected questions on the YRBS, presented as trends that have been established over the eight separate administrations of the YRBS in the Buffalo County area. The trend data included are from eight different samples of students. Therefore, they are views of different people at different times. Variation cannot necessarily be attributed to actions or programs that might have occurred in the time between the surveys. Results of the selected data are presented by the seven areas covered in the YRBS: intentional and unintentional injuries, tobacco use, alcohol use, other drug use, sexual behavior, nutrition, and exercise.

Frequency distributions are also presented by the seven areas covered in the YRBS following the Executive Summary. The report consists of tables detailing responses for each answer for each question, presented by gender and grade.

Any questions regarding this report or the data collected can be directed to the Bureau of Sociological Research at the University of Nebraska-Lincoln by calling (402) 472-3672, or by sending an e-mail to bosr@unl.edu.

Physical activity items remained relatively unchanged or decreased slightly from 2014 to 2016 among both female and male students. However, computer use for activities other than school work has increased among females from 41% in 2014 to 51% in 2016.

DO NOT write your name on this survey. The answers you give will be kept private. No one will know what you write. Answer the questions based on what you really do.

Completing the survey is voluntary. Whether or not you answer the questions will not affect your grade in this class. If you are not comfortable answering a question, just leave it blank.

Appendix C: AAPOR Transparency Initiative Immediate Disclosure Items

1. Who sponsored the research study:
See Executive Summary
2. Who conducted the research study:
See Executive Summary
3. If who conducted the study is different from the sponsor, the original sources of funding will also be disclosed:
See Executive Summary
4. The exact wording and presentation of questions and response options whose results are reported. This includes preceding interviewer or respondent instructions and any preceding questions that might reasonably be expected to influence responses to the reported results:
See Appendix A
5. A definition of the population under study and its geographic location:
See Executive Summary
6. Dates of data collection:
See Executive Summary
7. A description of the sampling frame(s) and its coverage of the target population, including mention of any segment of the target population that is not covered by the design. This may include, for example, exclusion of Alaska and Hawaii in U.S. surveys; exclusion of specific provinces or rural areas in international surveys; and exclusion of non-panel members in panel surveys. If possible the estimated size of non-covered segments will be provided. If a size estimate cannot be provided, this will be explained. If no frame or list was utilized, this will be indicated:

The data file used to create the sampling frame is obtained through the Nebraska Department of Education (NDE) website. All school districts have to register with NDE, so the list has complete coverage of school districts in the Buffalo County area. The school sample for this YRBS oversample consists of a census of all high schools in the Buffalo County area. Schools are then recruited to participate. Within each of the participating schools, a random sample of classrooms was selected and all students in those classes were targeted for participation. The Centers for Disease Control (CDC) provides BOSR with this random classroom selection procedure. The sampling design follows the probability proportionate to size (PPS) sampling method.

8. The name of the sample supplier, if the sampling frame and/or the sample itself was provided by a third party:

The data file used to create the sampling frame is obtained through the Nebraska Department of Education (NDE) website. All school districts have to register with NDE, so the list has complete coverage of school districts in the Buffalo County area. The school sample for this YRBS oversample consists of a census of all high schools in the Buffalo County area. Schools are then recruited to participate. The Centers for Disease Control (CDC) provides BOSR with this random classroom selection procedure. The sampling design follows the probability proportionate to size (PPS) sampling method.

9. The methods used to recruit the panel or participants, if the sample was drawn from a pre-recruited panel or pool of respondents:

Not applicable to this project.

10. A description of the sample design, giving a clear indication of the method by which the respondents were selected, recruited, intercepted or otherwise contacted or encountered, along with any eligibility requirements and/or oversampling. If quotas were used, the variables defining the quotas will be reported. If a within-household selection procedure was used, this will be described. The description of the sampling frame and sample design will include sufficient detail to determine whether the respondents were selected using probability or non-probability methods:

The data file used to create the sampling frame is obtained through the Nebraska Department of Education (NDE) website. All school districts have to register with NDE, so the list has complete coverage of school districts in the Buffalo County area. The school sample for this YRBS oversample consists of a census of all high schools in the Buffalo County area. Schools are then recruited to participate. The Centers for Disease Control (CDC) provides BOSR with this random classroom selection procedure. The sampling design follows the probability proportionate to size (PPS) sampling method.

11. Method(s) and mode(s) used to administer the survey (e.g., CATI, CAPI, ACASI, IVR, mail survey, web survey) and the language(s) offered:

The YRBS is a self-administered, paper-pencil survey, and is administered within the classroom. It is administered in English only.

12. Sample sizes (by sampling frame if more than one was used) and a discussion of the precision of the findings. For probability samples, the estimates of sampling error will be reported, and the discussion will state whether or not the reported margins of sampling error or statistical analyses have been adjusted for the design effect due to weighting, clustering, or other factors. Disclosure requirements for non-probability samples are different because the precision of estimates from such samples is a model-based measure (rather than the average deviation from the population value over all possible samples). Reports of non-probability samples will only provide measures of precision if they are accompanied by a detailed description of how the underlying model was specified, its assumptions validated and the measure(s) calculated. To avoid confusion, it is best to avoid using the term “margin of error” or “margin of sampling error” in conjunction with non-probability samples:

See Appendix B

13. A description of how the weights were calculated, including the variables used and the sources of weighting parameters, if weighted estimates are reported:

Not applicable to this project.

14. If the results reported are based on multiple samples or multiple modes, the preceding items will be disclosed for each:

Not applicable to this project.

15. Contact for obtaining more information about the study:
